Idaho Supreme Court Three-Year Architecture Initiatives Explained

Cloud Pivot
### What is the Cloud?

- The cloud is a remote data center that provides servers, software, and information that run on those servers. Cloud servers are in data centers all over the world.

- Users and companies do not have to manage physical servers themselves or run software applications on their own machines. They can access these through an internet connection.

### Why Move to the Cloud?

- Reduce complexity
- Stabilize and predict costs
- Improve security
- Enhance stability & availability
- Improve performance
- Reduce risk of data loss
- Enhance business continuity & disaster recovery
- Enable scalability (scale up & down)
What does it look like today?

If you use Zoom today, you are already experiencing the cloud.
Step One – Build an ISC Internet

Next up: Move FTR recordings in the cloud
Adding new capabilities – Providing Office 365

The final cloud Pivot – Hosting Odyssey in the cloud
